IMPERIAL

Data for Humanity Internships: Application Submission Guide

Contents

- Application requirements
- How to build your demo
- Other useful resources

Application requirements

Thank you for your interest in Imperial's Data for Humanity Internships. This document will guide you through how to complete your submission. Your application will have three parts. Please read all instructions below before you submit as you'll have to have all parts ready first.

Part 1: Build a Data Observatory Demo

We would like you to create a short demo for the Data Observatory. You can do this by either creating a poster-style demo using our web-based platform- **Vizzy Studio** (simple, web-based no coding platform) or our **Developers Playground** if you have coding experience and want to build something more dynamic.

The brief is simple and wide; simply use the data to tell a story using Transport for London's Open Data. Instructions on how to build the platforms are below.

Part 2: Film a 30 second intro video

It doesn't have to be polished- simply tell us why you would like to apply for this internship (30 secs max)

Part 3: Share your CV

Once you have all three components ready- please submit via the portal here https://tinyurl.com/D4H-2026

Closing date for submissions: 20 Nov 2026
Interviews: 9 Dec 2026

How to build your demo

We would like you to create a short demo for the Data Observatory. You can do this by either creating a poster-style demo using our web-based platform- Vizzy Studio (simple, web-based no coding platform) or our Developers Playground if you have coding experience and want to build something more dynamic.

The brief is simple and wide; simply use the Transport for London's Open Data dataset to tell a story. The DO is is a giant canvas made of 4 rows x16 columns of 1920x1080 screens. To build your demo you can either pathway below

Option 1: Vizzy Studio

Vizzy Studio lets you create content for the Data Observatory (DO) without any coding. Use it to build poster-style visual experiences using text, images, videos, and animations. Anyone can use this, simply log-in and start creating!

Log In

- Go to https://vizzy.dsi.ic.ac.uk
- Enter the verification code sent to your inbox.

Create your Project

- Select: + New Project.
- Project Details: complete & create project
- Stages (important!): select DO as the stage
- Edit Stage: Start creating!

Submit your application

- Submit your application here https://tinyurl.com/D4H-2026
- Don't forget to have your intro video (30 secs) and CV ready for the submission.

Option 2: Developer Playground

The Developer Playground is designed to support developers looking to create interactive content in the Observatory, Interactive demos are designed for users who want to create rich, engaging experiences in the Data Observatory.

Link to the Playground

- Go to https://github.com/dsi-icl/do-starter-playground

Create your Project

- Clone the GitHub repository to your local machine
- Edit the code to complete the tasks
- Push the completed work to a repository under your own GitHub account
- Ensure your repository is set to Public so our team can review
- Paste the link to your GitHub repository in the application form

Submit your application

- Submit your application here https://tinyurl.com/D4H-2026
- Don't forget to have your intro video (30 secs) and CV ready for the submission.

Other useful resources

1. Data Observatory Toolkit

The Data Observatory Toolkit provides templates, design guidance, and examples to help you create effective content for the DO.

- Access the toolkit: https://data-observatory.dsi.ic.ac.uk/login
- Explore templates, design principles, and example projects.

2. Copy of the Internship recruitment call

Are you a final-year undergraduate or postgraduate student with a passion for using data or design to drive positive change? Following the success of our first cohort, Imperial's Data for Humanity Internships are back, offering a unique opportunity to apply your skills to socially impactful projects and be part of a transformative moment for the Data Science Institute (DSI).

What's on offer?

▪ Up to 4 internship positions
▪ ~6 hours/week for 6 months
▪ £1,000/month stipend
▪ Contribute to the development of Vizzy Studio, a new visualisation platform for the Data Observatory (DO)
▪ Help shape strategic visualisations addressing global challenges in areas such as healthcare, AI, sustainability, innovation and humanitarian activities.

What is the Data Observatory?

The DO is Imperial's flagship immersive data space, a 313-degree wraparound visualisation environment designed to bring complex data to life. It's where data meets storytelling, enabling audiences to explore insights in a truly engaging and interactive way.

The roles

▪ **Data Science Interns:** work on real-world, socially impactful data science projects that feed directly into the DSI's Data for Humanity programme. Suited to applicants with a strong data science/computational background, experience with analysis, modelling or machine learning, and familiarity with Python.
▪ **Creative Design Interns:** no data science background required. Work at the intersection of art, design and data to translate project outputs into compelling, artistic demos and immersive experiences for the Data Observatory. Particularly well-suited to students from the Royal College of Art, though open to all eligible applicants.

Who can apply?

Final-year undergraduate or postgraduate students at Imperial College London or the Royal College of Art, from technical and creative disciplines alike.

Why apply?

▪ Work with one of the world's most unique immersive data platforms- there are only a handful of facilities like the Data Observatory anywhere in the world
▪ Gain hands-on experience in impactful data projects
▪ Work with experts in a collaborative, innovative environment

- Make a real contribution to how data is used to understand and address global issues Key dates
- Closing date: 20 Nov 26
- Interviews (in-person): 9 Dec 26
- Internships start: January 2027

If you have any questions about the programme before applying, contact Kate Heyworth, Data Observatory Team Leader, at k.heyworth@imperial.ac.uk.
